

## **CODE NO. 540**

### **RESIDENT CURRICULUM**

#### **Policy:**

Each program is responsible for the content of resident curriculum and that curriculum will be reviewed at each internal review. The Curriculum should be in compliance with common program requirements and specialty requirements and should provide effective educational experiences that lead to measurable achievement of the ACGME core competencies.

#### **Process:**

1. Each program must develop a resident curriculum that meets the Common and Specialty/subspecialty-specific requirements of the Accreditation Council for Graduate Medical Education, including the integration of the ACGME competencies into the curriculum.
2. Residents must participate in an educational program (either sponsored by the institution or by the program) regarding physician impairment, including substance abuse and sleep deprivation.
